DETAILED ACTION

Drawings

1. The drawings are objected to because they do not contain textual description. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

2. Claims 1-3 are allowed over prior art of record. The following is an examiner's statement of reasons for allowance: Applicant's admitted prior art discloses Campbell et al. (US 6366883) disclose the steps of determining a sequence of probability models

10/638,428

Art Unit: 2626

representing a given text, the probability models used are a finite number of HMM which describes the probability of acoustic production of symbolic units of a phonological nature, determining a sequence of digital data strings corresponding to the diction of the same given text, or acoustic strings, aligning the sequence of acoustic strings with the sequence of models (background of the invention section). Campbell et al. disclose a method for concatenating speech segments in a speech synthesizer. Both the applicant's admitted prior art and Campbell et al. fail to specifically disclose the step of determination of a confidence index of acoustic alignment for each association between a model of the sequence and an acoustic segment, known as a model alignment confidence index, and corresponding to an estimate of the probability a posteriori of the model given the observation of the corresponding acoustic segment, known as the a posteriori model probability, said step of determination of a confidence index of acoustic alignment providing data of the confidence index of acoustic alignment, characterized in that each step of determination of an alignment confidence index for a model comprises the calculation of the value of the said index at least from a combination of: the probability of observation of each acoustic string given the value of the non-observable process, known as the model probability and determined from known characteristic parameters of the probability model; probabilities of production a priori of all the models of the said directory, independently of one another, known as the a priori model probabilities; and the analytical estimation of the average duration of occupancy of the values of the non-observable process of the model. Furthermore, it would have been not obvious to one of ordinary skill in the art at the time of invention to modify the

Art Unit: 2626

applicant's admitted prior art and/or Campbell et al. in order to obtain the claimed invention. Therefore, claims 1-3 are allowed over prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion -

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huyen X. Vo whose telephone number is 571-272-7631. The examiner can normally be reached on M-F, 9-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Edouard can be reached on 571-272-7603. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
